# Flowfox Secures €7 Million Pre-A Funding to Innovate Global Import Container Logistics

Hamburg, Jan 21<sup>st</sup> 2025 – Flowfox, the innovative platform automating global import logistics, has raised €7 million in its Pre-A financing round. The round was led by MobilityFund, alongside continued support from existing investors.

This funding will accelerate Flowfox’s mission to transform inefficient and manual import container processes into seamless, automated workflows. Having partnered with major industry players like Hapag-Lloyd, Kuehne+Nagel and Fr. Meyer's Sohn, Flowfox’s platform delivers real-time automation, reducing costs, delays, and errors in global import container processes.

“This funding marks a pivotal milestone for Flowfox, solidifying our way to global roll-out,” said Patrick Pehmöller, CEO and Co-Founder of Flowfox. “With the backing of MobilityFund and our existing investors, we’re set to establish the global standard for fully automated, real-time import solutions in the logistics industry and continue working on our long-term goals with a solid foundation”.

Dr. Jan-Christoph Rickers, Managing Director & Co-Founder at MobilityFund, added: “Flowfox is setting a new global standard for import process quality—ocean carriers can no longer afford to ignore it. With the majority of the top 30 global importers already onboarded and successful proof of concepts with most of the top 7 ocean carriers, Flowfox is eliminating the chaos of email-driven processes that lead to costly claims, disputes, and delays. By providing a seamless, automated solution, Flowfox is becoming the essential digital infrastructure that global trade needs to ensure efficiency, transparency, and compliance across the entire supply chain. We’re thrilled to support their journey as they redefine industry standards and deliver unparalleled value to global supply chains.”

Flowfox will use the investment to enhance product offerings and strengthen integrations with leading ocean carriers and importers, developing the global standard for import automation.

Stay tuned for updates as Flowfox continues to reshape the future of logistics.
